

THE EXOTIC ASSET COMPANY

Spice

The autonomous hedging & risk desk for ordinary businesses.

We find the commodity, cash and climate risk hiding in an ordinary SMB's books — and hedge all three autonomously, the way only a Fortune 500 trading desk could.

Every small business is taking risks it never agreed to.

A bakery's costs **swing with wheat and gas prices, its savings earn nothing, and a heatwave can wreck a season** — three risks nobody puts in a spreadsheet. They show up as **running out of cash**.

EXPOSED TO COMMODITIES

flour = wheat • diesel = oil • metal = steel/aluminium. **874 French bakeries** went insolvent in 2022 — **+124.7% YoY** — after flour rose ~40% and energy spiked.

CASH AT 0%

The buffer it must hold to survive a shock sits at zero yield. UK SME current-account cash grew **£63.7B → £124B** (2013—24) as inflation erodes it.

EXPOSED TO WEATHER

No protection against heat & footfall swings — no way to plan for it. **54 of 96** French departments hit red heat alert; construction output falls **29—41%** under heat stress.

Nobody fixes this — hedging always needed a desk and a size these businesses don't have.

Spice covers all three, autonomously, at SMB size.

The rails, the brain and the volatility all arrived together.

We're not creating this market. Stripe (Bridge) and Circle built programmable money for the real economy and are **hunting for the use case** — their first movers are crypto-native, with zero real-economy reach.

① PROGRAMMABLE MONEY EXISTS

Add commodity-ETF options, on-chain lending and parametric escrow to stablecoin rails — a business holds a hedge, a yield position and a policy with **no broker and no minimum ticket**.

② AGENTIC AI RUNS THE DESK

A model reads a P&L, decomposes it into exposure, forecasts the shock and executes across venues **with no human in the loop** — a turnkey agent loop that didn't exist a couple of model generations ago.

③ THE WORLD GOT MORE VOLATILE

Brent jumped **\$72 → \$118** in a single month this quarter; gold is **+42%** on the year; 54/96 French departments on red heat alert — risk spiking on all three fronts at once.

We connect **rails that already exist** to **businesses that already need them** — reached through the accountants who already advise them.

Spice turns a P&L into a risk book it can actually manage.

It decomposes the cost structure into the exposure underneath — **"41% wheat, 22% energy"** — forecasts the margin hit from historical commodity-price variation, then hedges across three venues, **one per risk**. No human spots the exposure, prices it, or calls a broker.

INPUT COST → OPTIONS

Calls on regulated commodity ETFs (wheat / gas / oil) via Alpaca. Caps the input-price spike.

IDLE CASH → YIELD

Sweeps idle cash into on-chain lending (Aave / Morpho) instead of letting inflation erode it. Recallable.

CLIMATE → INSURANCE

Parametric escrow pays out automatically when a price or weather index crosses a trigger — no adjuster, no claim.

A bakery, a trucking firm or a metalworker gets the **same risk desk a Fortune 500 treasury has** — in the background, settling in stablecoins, 24/7.

A €169B/year market that nobody is pricing.

€169B

REVENUE TAM / YR • 14.3M ACCOUNTS

€113B

SAM • 9.8M EU+US ACCOUNTS

€169M

BASE SOM • 14.7K CLIENTS @0.15%

LAND-AND-EXPAND	CLIENTS	ARPU	ANNUAL REVENUE
Wedge — France, hedging-only	500	€2.4k	€1.2M
France beachhead — 3% suitable	16,500	€7.1k	€117M
EU+US SAM — base 0.15% (upside €563M)	14,748	€11.5k	€169M

We never assert a take rate: the implied **1.1—1.6%** sits inside the published group-purchasing fee band (0.86—3.62%), and blended ARPU ~€11.9k reconciles to the €169B TAM from two directions. Upside SOM at 10—20× → **€5.6—11B** — décacorn-plausible on the SAM alone.

Per-business, a hedging tool. At scale, irreplaceable.

CASH POOLING

Pooled SMB liquidity gets hedge pricing & execution no single small business could.

DATA POOLING

The real cost structures, margins and commodity exposures of millions of ordinary businesses — in real time, at the micro level.

THE ENDGAME

A live, ground-truth map of the real economy. Worth more to **hedge funds & central banks** than the SaaS ever will be.

The wedge sells hedging to SMBs. The company sells **the real economy's nervous system** to the people who move markets. → the décacorn.

Land metals-first, where the pain is sharpest.

THE KILLER LINE

Stripe and Circle made dollars programmable. We make **the real economy** programmable.

We find the commodity, cash and climate risk hiding in an ordinary business's books and hedge it on rails that were payments-only until now.
